Note: This abridged life table is constructed from the estimated population in 1981, 1982 and 1983 and the total number of deaths registered in these years. The column headed I<sub>x</sub> shows the numbers who would survive to the exact age of x, out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 1981-1983. Column e<sub>x</sub>° shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 1981-1983 mortality probabilities from age x onwards.
